Allspring

Best Global Equities Manager

A rising star for active solutions across public markets

Allspring Global Investments is an independent, global asset manager dedicated to active management across public markets. With over US\$600 billion in assets under management and advisement, Allspring manages a substantial and diverse global equity platform spanning more than US\$130 billion in assets.

Allspring's equity capabilities extend across global, regional, and emerging markets, supported by experienced investment teams and a flexible, multi-style framework designed to meet evolving investor objectives.

Systematic Global Equities – quantitative rigour grounded in fundamental principles

At the core of its Global Equities capabilities is the firm's Systematic Core Equity team, who combine the scale and discipline of a systematic approach with the thoroughness of fundamental insights. This integrated approach, developed since the early 1990s, allows the team to identify opportunities driven by behavioural biases, structural inefficiencies, and changing market conditions, while maintaining a robust risk management framework.

This approach delivers a balance of consistency and adaptability – leveraging quantitative rigour while incorporating fundamental oversight to navigate evolving market environments effectively. Solutions include lower risk and higher risk capabilities with flagship offerings covering both US and Global markets plus innovative income and climate funds.

Emerging Markets Equities – capturing long-term structural growth

Allspring's Emerging Markets Equity capabilities complement its global platform by focusing on high-quality companies with strong fundamentals and attractive long-term growth prospects.

Through a disciplined bottom-up investment approach, the Emerging Markets teams seek to identify businesses with sustainable competitive advantages, robust balance sheets, and compelling valuation opportunities. The differing strategies employed are designed to capture the structural growth potential of emerging economies while managing inherent market risks through diversification and active risk controls.

This deep and integrated emerging markets expertise enables clients to access a broad opportunity set and participate in the next phase of global economic growth.

Delivering outcomes for insurance clients and beyond

Allspring's Global Equities (Developed and Emerging Markets) platform has demonstrated particular relevance for insurance investors, where income generation, capital efficiency, and downside risk management are critical.

Through strategies such as Global Equity (Enhanced) Income, Climate Transition Global Equity, Core Global Equity and Global Emerging Markets, we provide solutions that combine income, capital appreciation, and sustainability objectives, aligned with the specific needs of insurers across Asia and globally.
